#### Contents

Non-polarized Water

Polarized Water

Solvated Water

Summary

#### Non-polarized Water

Atom charges	Mulliken	NPA	ESP(MK)
0	-0.603	-0.936	-0.724
Н	0.302	0.468	0.362
Н	0.302	0 468	0.362

Table: Atomic charges (a.u.) on each atom of non-polarized water

All results are calculated under M06-2X/def2-QZVP with Gaussian16.

October 12, 2019 南京大学匡亚明学院

Atom charges	Mulliken	NPA	ESP(MK)
0	-0.642	-1.011	-0.877
Н	0.295	0.486	0.449
Н	0.274	0.483	0.379

Table: Atomic charges (a.u.) on each atom of polarized water, Case I

October 12, 2019 南京大学匡亚明学院 4 /

## Case II

•	Atom charges	Mulliken	NPA	ESP(MK)
	0	-0.655	-0.950	-0.550
	Н	0.353	0.496	0.358
	Н	0.352	0.495	0.341

Table: Atomic charges (a.u.) on each atom of polarized water, Case II

南京大学匡亚明学院

#### Case III – with Background Charges

Atom charges	Mulliken	NPA	ESP(MK)
0	-0.365	-0.787	-0.523
Н	0.720	0.647	0.725
Н	-0.354	0.139	-0.202

Table: Atomic charges (a.u.) on each atom of polarized water, Case III

October 12, 2019

#### Case IV – Solvated Water

Atom charges	Mulliken	NPA	ESP(MK)
0	-0.640	-0.950	-0.763
Н	0.320	0.475	0.381
Н	0.320	0.475	0.381

Table: Atomic charges (a.u.) on each atom of water in cyclohexane solvent (PCM model)

The results show that water molecule is a little bit more polarized in cyclohexane.

## Summary

Atom	non-polarized		Ш	Ш	IV
0	0	-0.153	0.174	0.201	-0.039
Н	0	0.087	-0.004	0.363	0.019
Н	0	0.017	-0.021	-0.564	0.019

Table: changes of ESP charges on each atom (set non-polarized results as zero)
